

ABSTRACT OF THE DISCLOSURE

PASSWORD VALUE BASED ON GEOGRAPHIC LOCATION

1 An electronic processing device having GPS card and antenna, such
2 as a laptop or personal digital assistant, can be enable only when a
3 geographic-specific password is entered. Geographic regions are established
4 in the electronic processing device with a user interface and priorities can be
5 granted to the regions. The user further stores a geographic-specific
6 password for each of the geographic regions. When the user travels and
7 wishes to enable the electronic processing device, the GPS card and antenna
8 receive and process the device's current location. When the user inputs a
9 password, the electronic device determines if the password is appropriate for
10 the current location. If not, access is denied.
